

Water Quality: A Citizen's Guide

Pick Up After Your Pet: It's Polite AND Protects the Environment!

When our little friends leave those little surprises, rain washes all that pet waste and bacteria into our storm drains. This waste then pollutes our waterways. It's a health risk to pets and people, especially children. It is also a nuisance in our neighborhoods.

Pet waste is full of bacteria that can make people sick. If it's washed into the storm drain and ends up in a river, lake, or stream, the bacteria ends up degrading water quality. People who come in contact with the water can get very sick. Unless people take care of it, the waste enters our water with no treatment.

How Can Picking Up After Your Pet Help Keep Our Environment Clean?

You can help keep our lakes, rivers, streams, wetlands, and groundwater clean by applying the following tips.

- **Bring A Bag.** Carry a plastic bag when walking pets and be sure to pick up after them. Clean up pet waste in your yard frequently.
- **Clean It Up.** Pick up after your pets before watering your yard or cleaning patios and

driveways. Never hose pet waste into the street or gutter.

- **Dispose of the Waste.** Bury small quantities in your yard where it can decompose slowly. Dig a hole one foot deep. Put three to four inches of waste at the bottom of the hole. Cover the waste with at least eight inches of soil. Bury the waste in several different locations in your yard but keep it away from vegetable gardens!

In recent years sources of pollution like industrial wastes from factories have been greatly reduced. Now more than 60 percent of water pollution comes from things like residential car washing, cars leaking oil, fertilizers from farms, lawns, and gardens, pet waste and failing septic tanks. All these sources add up to a big pollution problem. But

each of us can do small things to help clean up our water too, and that adds up to a pollution solution!

Having a clean environment is of primary importance for our health and economy. Clean waterways provide recreation, commercial opportunities, fish habitat, and add beauty to our landscape. All of us benefit from clean water - and all of us have a role in getting and keeping our lakes, rivers, wetlands, and groundwater clean. WHY SCOOP?

6 Unsettling Facts About Dog Waste

Did you know?

72.8 million dogs currently live in the United States.
30,000 tons of waste is collectively produced every day.
That's **10 million tons** of dog waste produced every year.

That's a lot of dog poop, but what exactly is it doing to our **environment**?

2 Just one gram of dog waste can contain as many as 23 million fecal coliform bacteria.

Waste can seep into groundwater and spread salmonella and giardia. This poses a hazard to your pets, your family, and your landscape.

1 Dog waste is NOT fertilizer for your lawn.

In fact, it is just the opposite and can be very toxic to your soil. Due to their high-protein diet, dog waste is highly acidic and will actually burn your grass creating brown patches.

4 Dog fecal matter is a major contributor to stormwater pollution.

One out of three households have at least one dog, and all that dog poop left out can be blown into storm drains, lakes, and streams. When in water, the liquefied waste consumes the oxygen and releases ammonia, which contaminates our resources as well as harms the fish that reside there.

3 Your lawn mower doesn't help, in fact can make it worse.

Mowers will actually chop up the waste into smaller pieces and spread it further throughout your yard where you, your children, and your pets continue to step in it and then bring it into your home.

6 The Centers for Disease Control (CDC) confirms that hookworms, ringworms, tapeworms and Salmonella can be spread by contact with infected dog waste.

It can take over one year for dog waste to decay, but even when it has visibly disappeared, the parasite eggs it contained can linger on for years in your soil - leaving your family and your pets vulnerable to serious infection.

5 The EPA classified dog waste as a dangerous pollutant in the same category as toxic chemicals and oil.

The average dog discards approximately three quarters of a pound of waste per day, which adds up to 275 pounds per year. Your yard might be more polluted than you think.

What you can do

Bag it and trash it. **ALWAYS.**

Hire a local **pet waste removal company** to clean your yard on a routine basis.
